SUMMARY

AI/ML undergraduate with hands-on experience building machine learning pipelines, LLM-powered systems, as well as production full-stack web and mobile applications using Python, React and React Native.

EDUCATION

AMC Engineering College, Bengaluru
B.E. in Artificial Intelligence and Machine Learning | Expected 2027 | CGPA: 8.2/10

EXPERIENCE

Web Developer and Event Manager - Kaira Weddings & More
Bengaluru, India | Oct 2025 - Jan 2026

- Built and maintained the company website (kairaweddings.in), owning delivery from layout through deployment.
- Brought in multiple new clients through website SEO along with social media marketing.
- Coordinated vendors and clients on-site during live events displaying composure during stressful tasks.

PROJECTS

ChatVTU – Agentic RAG Application for VTU Exam Preparation.
Python, LangGraph, OpenSearch, Redis, Docker, Airflow

- Solved the issue of out-of-syllabus answers from regular LLM's such as Claude, ChatGPT by providing answers from **verified student notes**, also producing respective **diagrams** required as per VTU marks evaluation.
- Implemented **hybrid retrieval** in OpenSearch, a LangGraph agent layer with **document grading**, **query rewriting**, and out-of-domain **guardrails** to cut hallucinated answers.
- Integrated **Airflow DAGs** so students can **upload their own notes** if needed for automatic ingestion.

Doorman - Multi-Tenant Hostel Management Platform.
FastAPI, React, React Native, Postgres.

- Built a SaaS application for **college hostel management**; providing a **web dashboard** for the warden to monitor student activity such as – **Gate Logs**, **Mess Count**, **Live Occupancy Tracking** and **Inventory** etc.
- The RN App includes **QR-based gate entry/exit system**, **Lost&Found**, **Complaints**, **Notices** etc for students to improve efficiency & security.
- A Guard login which displays list of students outside post curfew, allowing the guard to contact the student and **ensure safety**.

Esports Video-on-Demand (VOD) Auto clipper.
Python, faster-whisper, FFmpeg, CUDA.

- **Automated** the tedious process of **manually finding exciting** clips from multi-hour videos through a pipeline.
- Generated word level transcripts using faster-whisper to extract hype moments by passing the transcript to an LLM, outputting the timestamps for the clips.
- The clips are then **automatically cropped to 9:16 ratio**, with subtitles **ready to be uploaded** to TikTok/Reels.

SKILLS

Languages: Python, JavaScript, SQL
Machine Learning and AI: Scikit-learn, Agentic RAG, LangGraph, LangChain, Model Evaluation, Pytorch.
Data and Backend: REST APIs, ETL, PostgreSQL.
Tools and Platforms: Git, GitHub, Docker, React, React Native, AI Tools.

Certifications

NPTEL - **Applied Accelerated Artificial Intelligence** (Gold Elite – 92/100).
